All -

The Manchester lab gave us the PCB results from the ORRCO sampling event at APES in Tacoma, Everett, Spokane, Anacortes, K. Falls, and Medford.

Long story short (97 pages of lab report), we only found one hit beyond those tanks/ trucks already identified as containing PCBs. Tank 4 at K. Falls, an incoming product tank, tested over the regulatory threshold. The tank held at the time a little over 17 thousand gallons. The test came back at 6 mg/kg for PCB-1248. The threshold is 5 ppm (mg/kg).

PCB contaminated was confirmed present as reported by the facility at APES, Spokane, and K. Falls.

As for the total halogen tests (the probably basis for a RCRA enforcement action), NEIC is supposed to have preliminary results to me early next week.
